machine-checkable verification
review / task-success verification
this work
bubble size ∼ output volume
$\mathcal{L}_3$ science
$\mathcal{L}_2$ law
$\mathcal{L}_1$ knowledge
Learning theory (NTK, stat.-mech, RL theory)
Interpretability (fragments)
Discovery machines, other domains (Eureqa, GNoME, AlphaFold)
Empirical laws (scaling-law family)
SAI-min (this work)
Empirical ML & systems (methods, recipes, infra) — *the field's volume*
Program search / NAS
Agent memory
AI-scientist systems
Curation & meta-science
human
human + machine
machine
benchmarks & evaluations — every current instrument reads level one: task performance now (MLE-bench, RE-Bench, PaperBench, DSBench, MLGym, ScienceAgentBench, SWE-bench, METR horizons, AIQ), not persistent verified knowledge or ascent
